Hello there!

If you know about some handy online tools for various things post them below :)

Let me start with:

weboas.is - it's like a start page, unfortunately it has google search box but you don't have to use it and it's loaded with many useful sites from categories: Downloads, Stream, Social, Reddit, Code, News, Cloud and More. Also it contains a notepad.

WARNING: because it is filled with dozens of sites it means that some can be not pleasing to visit. If you're unsure of the site better check it in search engine first.

virustotal.com - a tool which can help you detect viruses in your just downloaded files or scan websites for any malwares and stuff

A list of some useful sites. (definitely not 50)
